

# CSIT TOI

**CSIT Libraries**

Tibor Frank

Feb 6, 2018

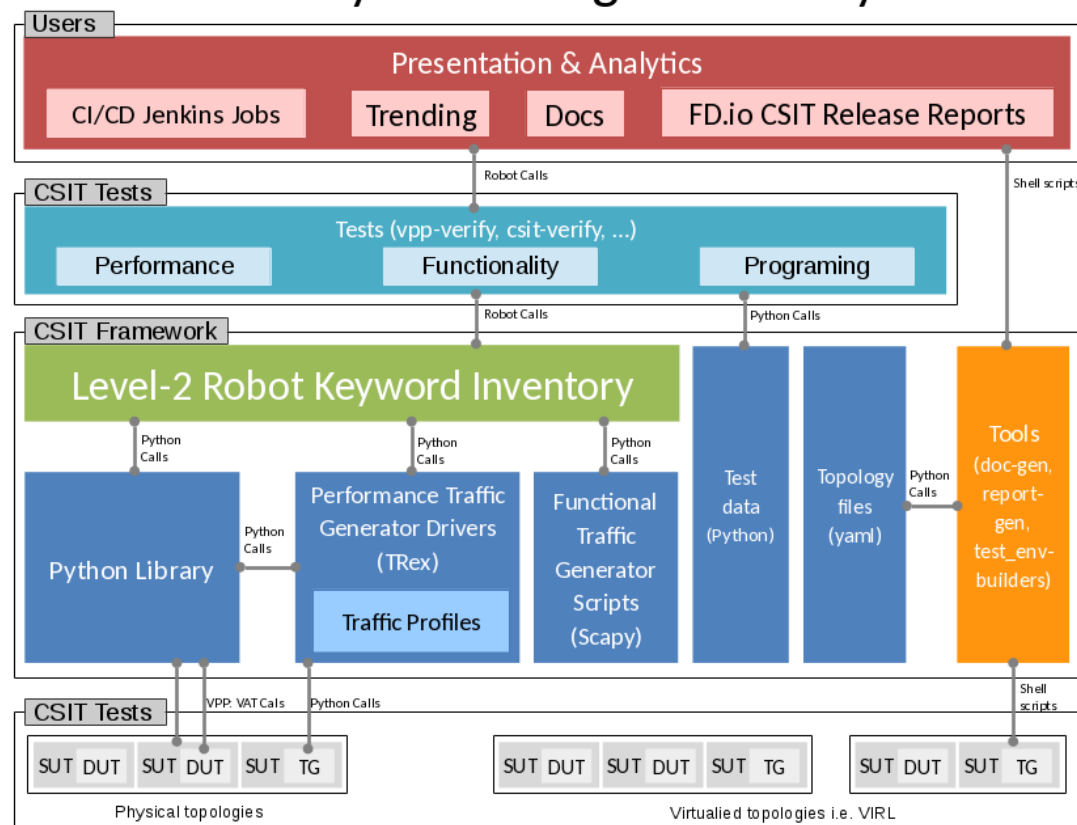

# CSIT Libraries

- L1 and L2 libraries in CSIT hierarchy
- L1 Python Libraries
- L2 Robot Libraries
- ☐ Test Lifecycle Abstraction
- ☐ L2 RF Keywords Functional Classification
- ☐ CSIT Design Guidelines

# L1 and L2 Libraries in CSIT Hierarchy

## CSIT System Design Hierarchy

# L1 Python Libraries

- Lowest level CSIT libraries abstracting underlying test environment, SUT, DUT and TG specifics;
- Used commonly across multiple L2 keywords.
- Performance and functional tests:
  - L1 keywords are implemented as Python libraries.

Source code: <https://git.fd.io/csit/tree/resources/libraries/python>

For more information see: [https://wiki.fd.io/view/CSIT/Design\\_Optimizations#CSIT\\_System\\_Design\\_Hierarchy](https://wiki.fd.io/view/CSIT/Design_Optimizations#CSIT_System_Design_Hierarchy)

# Performance TG L1 Keywords

- Support for TRex and wrk traffic generators today;
- CSIT IXIA drivers in progress.

Source code: <https://git.fd.io/csit/tree/resources/tools/trex>

Source code: <https://git.fd.io/csit/tree/resources/tools/wrk>

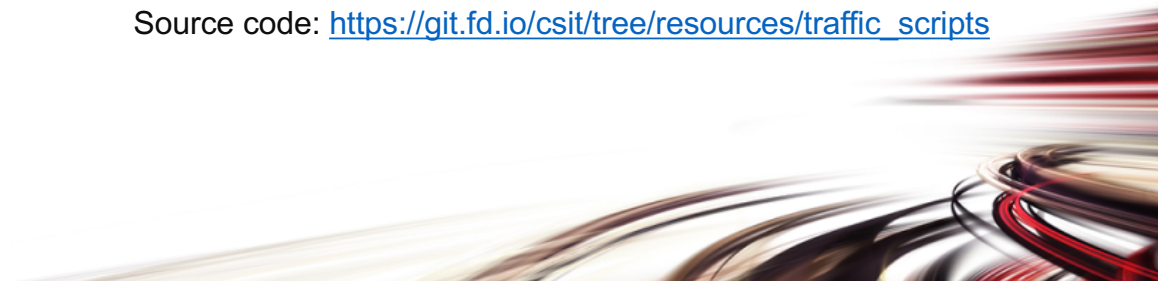

# Traffic profiles and scripts

- Performance data plane traffic profiles
  - TG-specific stream profiles provide full control of:
    - Packet definition;
    - Stream definitions;
    - Stream profiles are independent of CSIT framework;
    - Easily extensible;
    - Same stream profile can be (and is) used for different tests.
- Functional data plane traffic scripts
  - Scapy specific traffic scripts

Source code: [https://git.fd.io/csit/tree/resources/traffic\\_scripts](https://git.fd.io/csit/tree/resources/traffic_scripts)

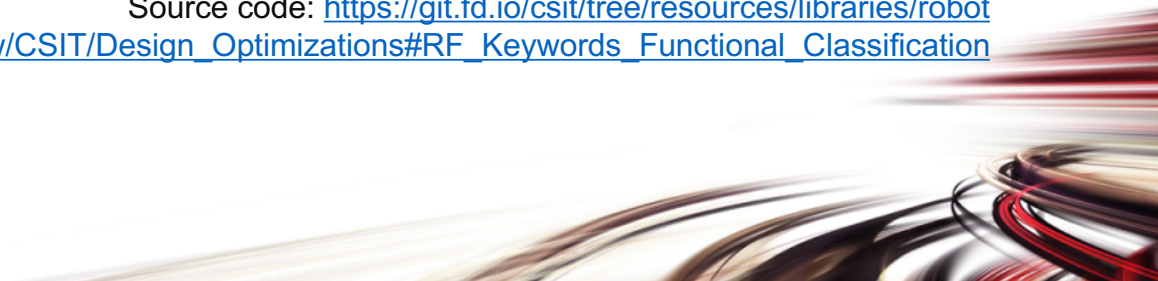

# L2 Robot Libraries

- Higher level CSIT libraries abstracting required functions for executing tests;
- L2 KWs are classified into the following functional categories:
  - Configuration;
  - Test;
  - Verification;
  - StateReport;
  - SuiteSetup;
  - TestSetup;
  - SuiteTeardown;
  - TestTeardown.

Source code: <https://git.fd.io/csit/tree/resources/libraries/robot>

For more information see: [https://wiki.fd.io/view/CSIT/Design\\_Optimizations#RF\\_Keywords\\_Functional\\_Classification](https://wiki.fd.io/view/CSIT/Design_Optimizations#RF_Keywords_Functional_Classification)

# Test Lifecycle Abstraction

- Anatomy of Good Tests for CSIT:
  - Suite Setup
  - Test Setup
  - Test Case – uses L2 KWs with RF Gherkin style:
    - prefixed with {Given} – Verification of Test setup, reading state: uses Configuration KWs, Verification KWs, StateReport KWs;
    - prefixed with {When} – Test execution: Configuration KWs, Test KWs;
    - prefixed with {Then} – Verification of Test execution, reading state: uses Verification KWs, StateReport KWs;
  - Test Teardown
  - Suite Teardown

For more information see: [https://wiki.fd.io/view/CSIT/Design\\_Optimizations#Test\\_Lifecycle\\_Abstraction](https://wiki.fd.io/view/CSIT/Design_Optimizations#Test_Lifecycle_Abstraction)

A decorative graphic in the bottom right corner consisting of several overlapping, curved, metallic-looking bands in shades of gold, brown, and red, creating a sense of motion and depth.

# CSIT Design Guidelines

- Strictly follow the [CSIT Design Hierarchy](#);
- Tests MUST use only L2 Keywords;
- All L2 KWs are composed of L1 KWs and/or other L2 KWs;
- Test and KW naming should be following CSIT naming guidelines;

For more information see: [https://wiki.fd.io/view/CSIT/Design\\_Optimizations#Applying\\_CSIT\\_Design\\_Guidelines](https://wiki.fd.io/view/CSIT/Design_Optimizations#Applying_CSIT_Design_Guidelines)
